

ADF TRUEWAY LTD

RENEWABLE ENERGY

COMMUNITY ENERGY PROJECT DEVELOPMENT

Green light for using your own generated energy

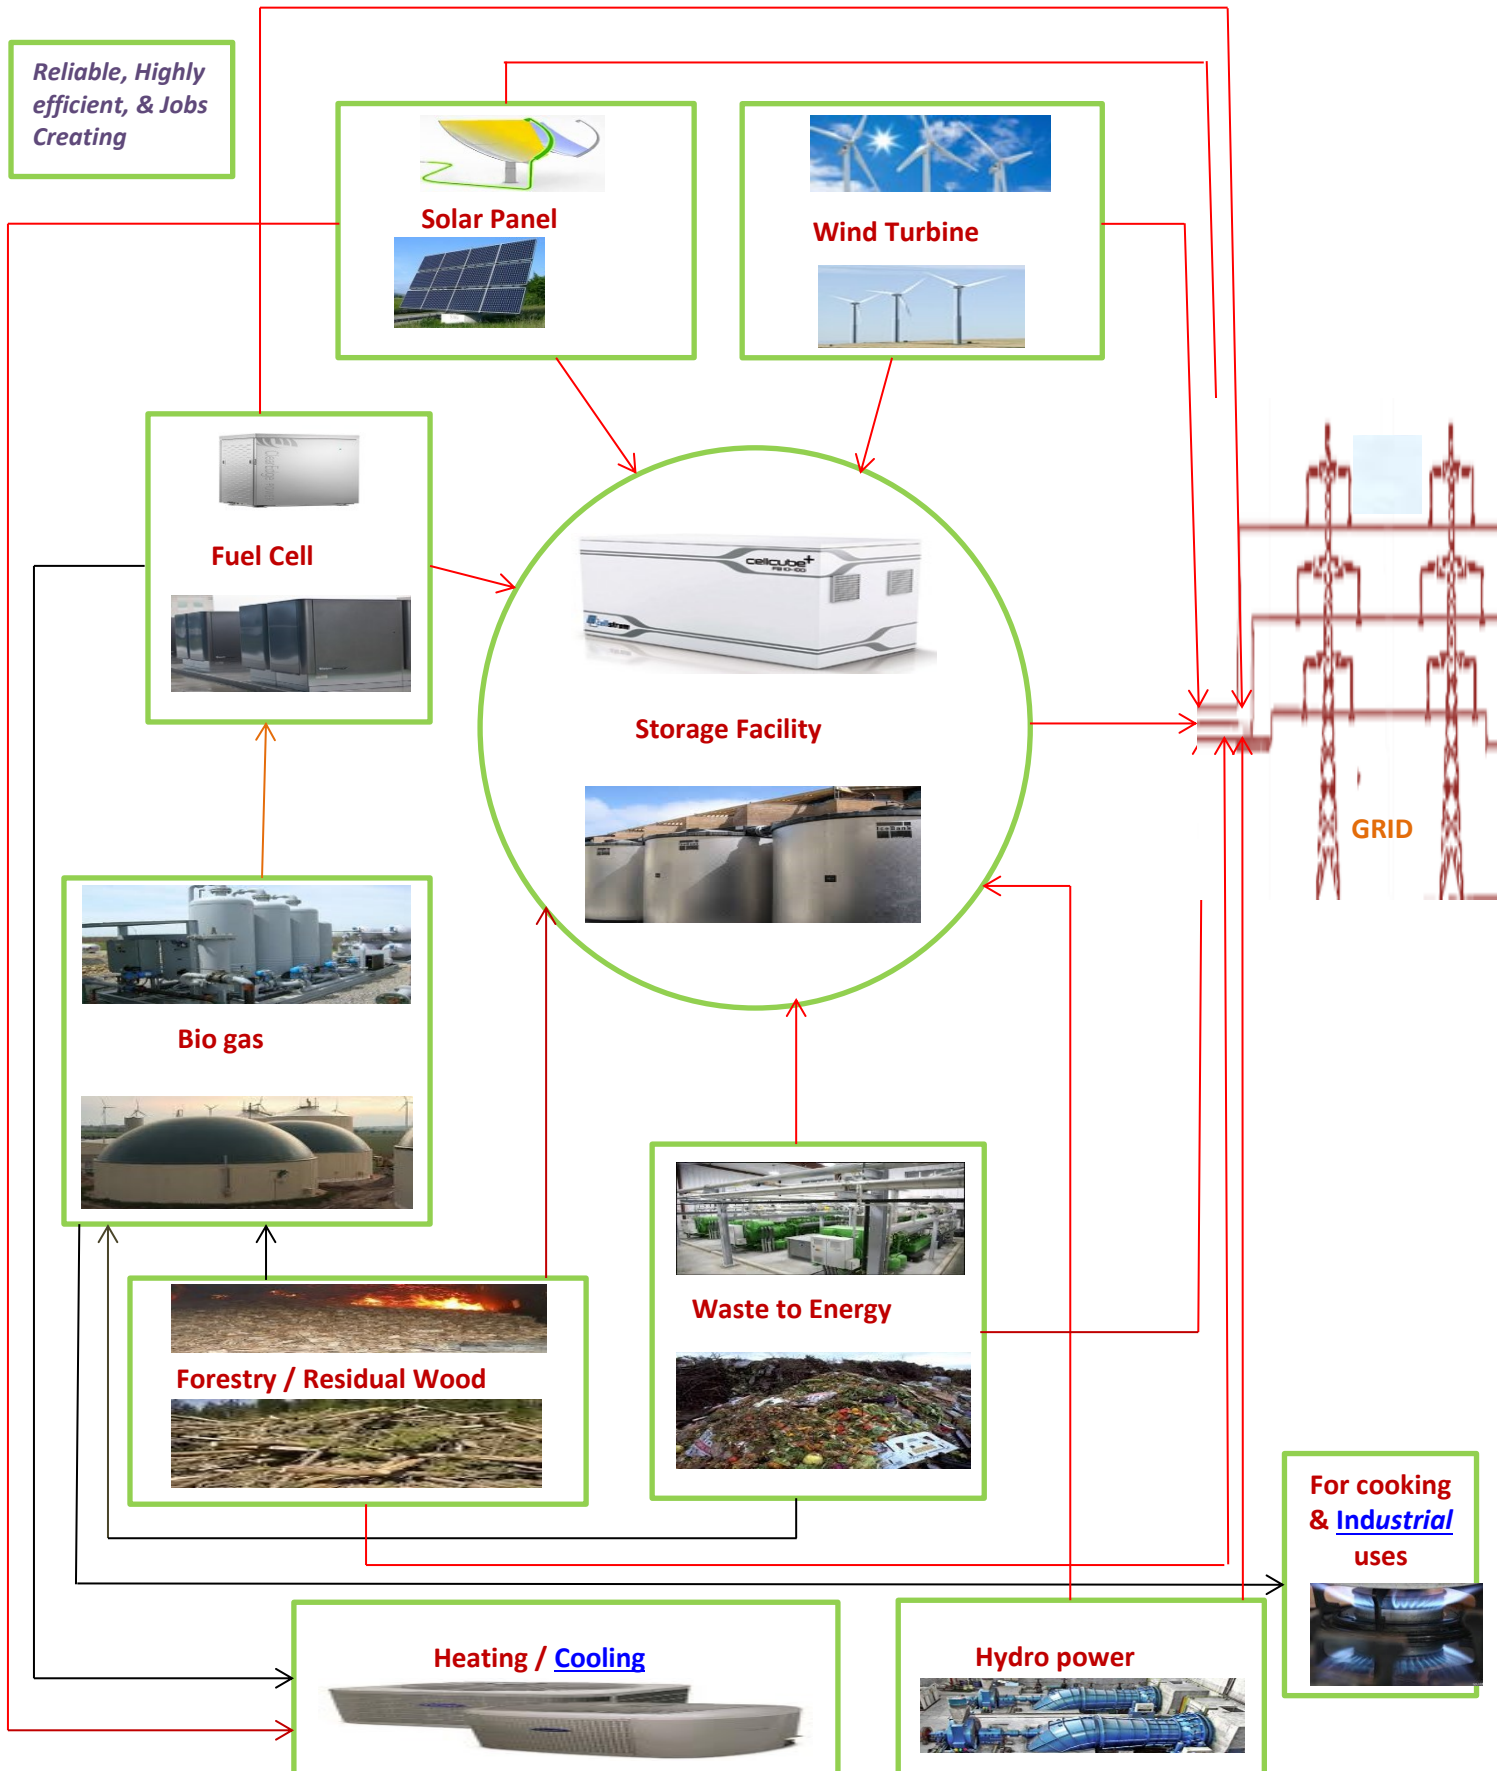

We work with communities in producing reliable energy of certifiable quality from locally and regionally available renewable resources. This help capital flows remain in the region where they serve as catalysts for a positive economic trend, promote major communal developments and improve the residents' quality of life.

Energy technologies we install can ensure reliable, secure energy around the clock. They also help diversify energy sources to reduce supply risks. And because our projects can offer price certainty and energy cost predictability, they help clients plan for their energy needs best in the future.

Combining Waste, Hydro power, Wind, Solar and Forestry Residues to Generate Hundreds MW of Electricity for communities

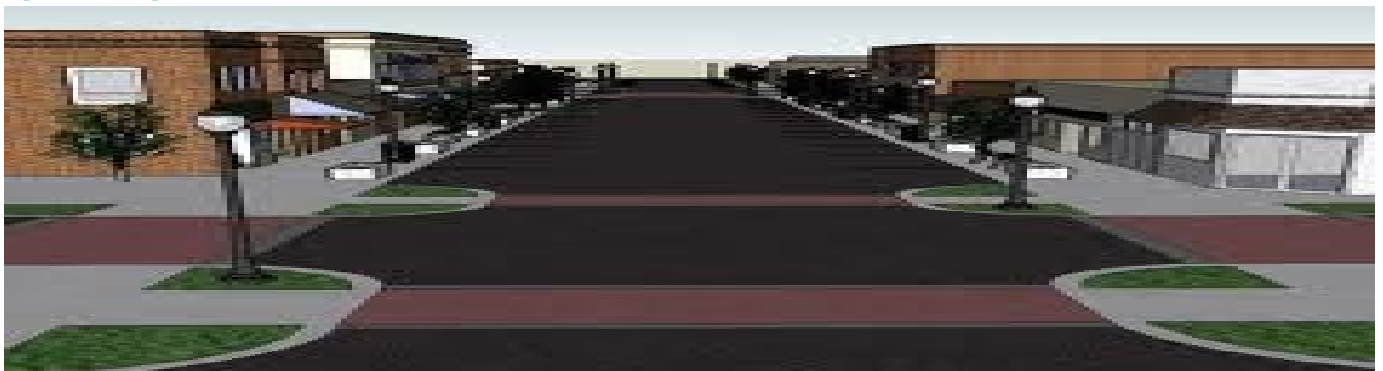

Energy Solutions

With the Combination of local resources such as Solid Waste , Water, Wind, Solar, Forestry residues and other energy resources with the models technology will locally generate low cost self-sufficiency safe of Electricity, Gas, and fertilizer for the benefit of the people.

In the public sector, we work with communities, improving the energy efficiency and clean power capacity of their administration. We also develop major energy efficiency and renewable power projects for Communities, and design and build central utility plants that ensure energy security and reliability. And we help schools, colleges and universities upgrade their facilities to make them more efficient, and develop renewable power options such as solar, wind, Biogas and from waste, hydro power or other sources of energy.

Building Automation Solutions we believe that our customers comes first and this is why we work with them to provide real solutions to real problems. Through innovation, determination and the sheer passion of our strong workforce to make incredible achievements in this ever growing sector of the market.

We work with clients and partners to develop fund and support WtE deployment projects that use proven technology, that are profitable and progressive; projects that currently use proven plasma gasification and internal combustion engines/gas turbines

Adfruewayltd and with our partners provides the planning, design, construction, operation and sales of customized, highly efficient and reliable CO₂-neutral solutions for multifunctional Energy Systems from renewable energy, with an Integrated Resources Management for all communities, business, industries, enterprises and households which have a need for a self-sufficient, sustainable energy production with CO₂ neutrality.

Through new technologies, with joint effort-designed central plants provide many opportunities for improving efficiency and lowering operating and maintenance costs. With central plant projects we address the needs for mission-critical, industrial, and mixed-use facilities. Not only design and build these facilities, but we also operate them while providing warranties of availability, power quality, and/or energy savings.

Our Central plant solutions include:

- Plant design and construction base on costumer choices
- Energy storage systems & sizing
- Electricity capacity upgrades & timing
- Renewable and distributed generation including co-generation, micro-turbines, biomass plants, Biogas, fuel cells, solar and Wind
- Utility assessments with extra measures
- Operations and asset management

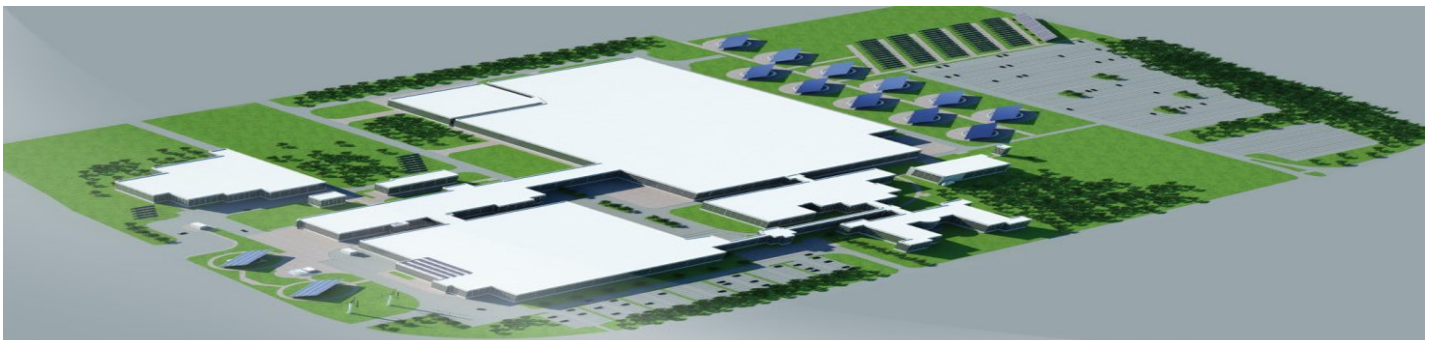

Because we are affiliated with many companies, we provide unbiased choices and deliver objective, turnkey-engineered solutions tailored to meet our customers' needs using the right application of technologies.

Our fundamental business model is the provision of communities with energy, food production, and jobs creation thereby aiming at the creation of energy self-sufficiency and safety as well of other jobs opportunities through new business establishment.

Our contracts include performance guarantees backed by monitoring and verification services. On projects, we work with the customer to establish energy usage benchmarks along with recommended strategies for meeting those benchmarks. We install advanced metering devices and alarms to monitor critical systems and create online reporting systems, enabling our customers to analyse energy usage patterns using a variety of formats and time frames

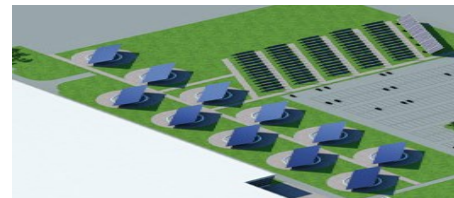

“Comprehensive Solution for Energy processing with highly efficient reliable product at lowest and affordable cost.”

As a project developer ADF Energy Solutions understands the importance of reliable, secure energy. For energy reliability projects, we design and build central utility plants, energy distribution systems and other facilities that ensure highly reliable, secure energy around the clock, including: (Combining Waste, Hydro power, Biogas, Solar, Wind Energy and other source of energy)

- Uninterruptible power supply and standby backup of other source of energy
- Central plant design, construction, operation and maintenance
- Energy storage systems
- Delivery warrantees for power, power quality and thermal energy
- Flexible and low-cost financing options
- Probabilistic Risk Analysis (PRA)
- Electricity capacity upgrades
 - Community Solar Farm
 - Community Wind Farm
 - Community Biogas Plant
 - Community Waste to Energy Plant
 - Community Biomass Plant
 - Community Micro-Hydro Power Plant
 - Community Energy & Food Crops Production

ADFTRUEWAY LTD

RENEWABLE ENERGY

**POWERING
COMMUNITIES,
EMPLOYING PEOPLE**

COMMUNITY BENEFITS

1. Self-dependence
2. Reliable Power Supplier
3. Jobs Creation From Green Energy
4. Sources Of Revenue
5. Bring Development
6. Attract Tourism
7. Education / Technology Transfer
8. Humanitarian Assistances Benefit
9. Waste Recovery
10. Clean Environment
11. Carbon Trade Benefit
12. Help Capital Flows To Remain within the community
13. Food Production
